

A New Standard in HVAC

Destratify Your Air . . . Decrease Your Costs!

The destratification fan is the new standard in HVAC! *Air-Row destratification fans separate the initial air rotation function from your building's HVAC air supply system.* Subsequently, the work of your HVAC system is reduced, saving you up to 20% in energy costs. Most fans just move the air. Air-Row destratification fans, with our targeted air movement, move the minimum amount of air to precisely where it is needed while at the same time achieving an even temperature.

Bringing in Air-Row Advantages at the Design Stage

Air-Row Fans can save you costs in the design phase also! If we can talk early on in your project, in the design stage, our fans can reduce the size of air handlers needed on the roof and the amount of duct work on your ceiling.

Take the heat off your HVAC system.

Manage the air already in your building.

Adopt the new standard in energy saving!

Bottom Line Advantages

- Reduces HVAC system energy usage by over 20%
- Promotes warm and dry floors
- Increases equipment life and reduces repairs
- Enhances comfort of employees and customers

Ideal Applications

- Supermarkets
- Convenience stores
- Retail Stores
- Warehouses
- Loading docks and receiving areas

Features

- Three speed preset with EC motor
- Infinite range available with shaded pole motor

Under Development

- Factory installed thermostat
- Air purification – improves indoor air quality by reducing odors, gases, and bacteria
- Speed control – programmable for three speeds, preset at the factory
